Modular mini soap

This mini-miracle offers the versatility of our market-leading full-size dispenser, but is just 190mm high. Using the same interchangeable pumps as the full-size version, our mini dispenser is every bit as versatile, accepting spray, foam, liquid soaps and gels. Its compact size makes it perfect for small spaces, and is ideal for catering, office and even domestic use.

Despite its small stature, the dispenser offers a very reasonable 400ml reservoir for soaps, and has excellent chemical compatibility. Simple close-to-lock cover, with choice of hidden button or key to open.

- As versatile as our full-sized dispenser, but perfect for smaller washrooms
- Ultra-durable, so an excellent long-term investment
- Time-saving close-to-lock cover makes refilling soap levels extra quick

refillable reservoir

foam pump

spray pump

weight (approx.)	0.3kg
order reference	refillable liquid, spray, foam - MMSDL MMSDS MMSDF

Thanks to its petite size, the mini soap dispenser can also be used as a toilet seat sanitiser. It will fit perfectly next to any of the Modular paper dispensers, and the flexibility of it's design allows either foam, or spray products to be used. It works by spraying disinfectant onto the tissue and wiping around the toilet seat before using it. Just another step towards improving washroom hygiene.
