# Modular touch-free soap

Touch-free soap dispensing brings better hygiene to any environment, and helps monitor use by controlling the amount of soap delivered with each touch. No electrical fitting is required, as each dispenser is economically operated by AA batteries. It also features an auto-switch function between two battery compartments for longer running times.

To ensure optimum cost savings, the device has a 'sleep mode', and a new capacitive sensor that prevents accidental soap delivery. Easy to program using LED lights, and you can fit the touch-free mechanism to existing soap dispensers for a low-cost upgrade.

- Choose 1ml, 2ml or 3ml shots of soap – and control costs
- Large 650ml refillable reservoir cuts restocking times
- Touch-free mechanism can be fitted to existing soap dispensers

<b>suitability</b>	flowable liquid soaps, gels and creams
<b>capacity</b>	650ml
<b>pump</b>	acetal housing with viton seals and polypropylene pump 1ml single shot size
<b>battery</b>	space for two sets of 4 x AA batteries (unit operates on one set of batteries and automatically switches to second set when run down)
